CTA rail ridership recovery, 2019-2025

138 comparable stations from CTA annual reports, with a 100,000-entry 2019 threshold

Loading and preparing the station data

```
# https://github.com/zixinhu23/cta-ridership-recovery
from pathlib import Path

import pandas as pd

from scripts.cta_recovery_analysis import draw_recovery

# Station totals compiled from CTA's annual ridership reports.
DATA = Path("data/processed/cta_station_recovery.csv")
FIGURE = Path("output/figures/cta_recovery.png")

def load_rides(path):
    types = {
        "station": "string",
        "line": "string",
        "entries_2019": "Int64",
        "entries_2025": "Int64",
        "comparable": "boolean",
    }
    rides = pd.read_csv(path, dtype=types)
    rides["station"] = rides["station"].str.strip()
    rides["line"] = rides["line"].astype("category")
    return rides

def recovery_table(rides, min_base=100_000):
    rides = rides.dropna(subset=["station", "line", "entries_2019", "entries_2025"])
    rides = rides[rides["comparable"]]
    rides = rides[(rides["entries_2019"] >= min_base) & (rides["entries_2025"] > 0)]
    rides["recovery"] = 100 * rides["entries_2025"] / rides["entries_2019"]
    return rides.sort_values("recovery").reset_index(drop=True)
```

Output

```
Comparable stations: 138
Median recovery: 66.2%
Slowest stations:
    station line   recovery
   Oak Park Blue  35.501092
    Pulaski Blue  35.751107
     Racine Blue  36.562495
     Austin Blue  38.941886
Forest Park Blue  40.169913
Median recovery by line:
line
Yellow    53.1
Purple    59.6
Brown     63.8
Red       64.4
Blue      64.7
Loop      69.2
Orange    69.3
Green     71.6
Pink      77.9
```

Two stations reopened in July 2025 and are retained in the CSV but excluded from the comparison.

Source: CTA Annual Ridership Reports, CY2019 and CY2025. Rates are shown for the 138 comparable matched stations.

Recovery by station and line

The five slowest stations are all on the Blue Line's Forest Park branch

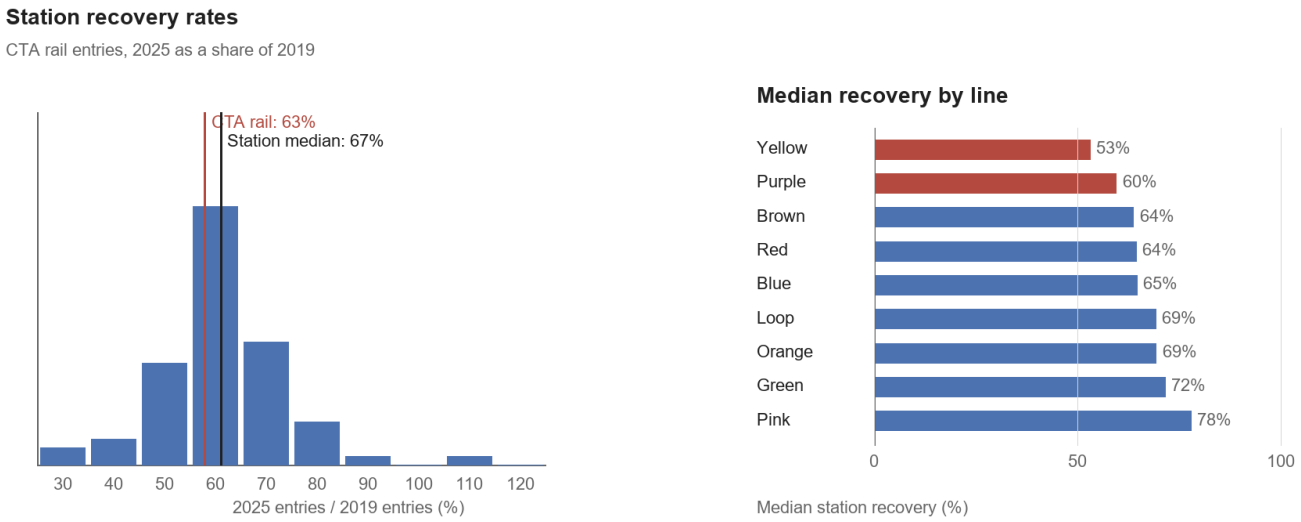

Figure 1. Station recovery rates and median recovery by line.

Summaries and figure call

```
def line_profile(stations):
    return stations.groupby("line", observed=True)["recovery"].median().sort_values()

rides = load_rides(DATA)
stations = recovery_table(rides)
line_medians = line_profile(stations)
slowest = stations.nsmallest(5, "recovery")

print(f"Comparable stations: {len(stations)}")
print(f"Median recovery: {stations['recovery'].median():.1f}%")
print("\nSlowest stations:")
print(slowest[["station", "line", "recovery"]].to_string(index=False))
print("\nMedian recovery by line:")
print(line_medians.round(1).to_string())

draw_recovery(stations, line_medians, FIGURE)
```

Findings

Among the 138 comparable stations, the median recovery was 66.2%. Line medians ranged from 53.1% on the Yellow Line to 77.9% on the Pink Line.

The five lowest station rates were Oak Park (35.5%), Pulaski (35.8%), Racine (36.6%), Austin (38.9%), and Forest Park (40.2%).

Morgan (118.2%) and Cermak-Chinatown (115.5%) exceeded their 2019 totals. Cermak on the Green Line reached 97.9%.

Station entries are not unique riders. CTA's 2025 reporting changes affect comparability; these results are descriptive.
